BRAND FOUNDATION / VERSION 1.0

NAU K DO
Brand Kit

A practical identity and design guide for the landing page, creative portfolio, and Google Antigravity implementation.

Core identity	Design direction
Custom multilingual wordmark · Red + white · Creative digital agency	Premium editorial · Desktop-inspired hero · Project-led storytelling

Status: working brand guide. The supplied logo and stated red/white identity are treated as established. Supporting colors, font recommendations, and UI rules are proposals for the website and can be refined.

01 / Brand foundation

What Nau K Do is

Nau K Do is a creative digital agency helping brands build a recognizable and professional presence online through social media management and design, content production, website design and development, brand identity, video editing, and motion graphics.

Brand idea

Make brands look and feel more considered online. The agency connects how a brand looks, what it publishes, and how people experience it digitally. The website should communicate creative confidence without feeling like a generic corporate marketing template.

Name and wordmark

The name is read as **Nau K Do**. As explained by the owner, the wordmark combines English lettering for “Nau,” a Hindi-style K character, and the Urdu numeral ■ at the end. Preserve this mixed-script construction and its order. The final numeral is an intentional part of the name, not a decorative element to remove.

Brand personality

Bold	Confident visual statements and clear hierarchy.	**Creative**	Distinctive layouts and carefully art-directed details.
Premium	Restraint, spacing, considered typography, and high-quality presentation.	**Approachable**	Human copy and clear next steps rather than corporate jargon.

Brand positioning

Position Nau K Do as a creative digital agency—not only a social media posting service. The connected offer includes social content, brand identity, website experiences, and video/motion work. Use concrete descriptions of services and actual project evidence instead of unsupported claims about results.

02 / Color system

The red-and-white identity stays. A restrained neutral palette supports the premium editorial direction of the reference without changing the brand's signature.

	Signature Red #E00000	Primary brand accent; logo backgrounds; CTAs; selected graphic elements.
	White #FFFFFF	Logo contrast, clean space, cards, and gallery backgrounds.
	Warm Off-White #F5F0E8	Proposed editorial canvas for the hero and selected sections.
	Deep Ink #281E1C	Main typography and occasional dark sections.
	Muted Text #6E625C	Secondary copy, captions, and supporting labels.
	Soft Neutral #F1ECE6	Subtle panels, borders, and supporting UI surfaces.

Recommended usage balance

Use warm off-white and white as the main canvas, deep ink for most text, and red as a deliberate accent. Red can dominate the logo and selected moments, but not every section. Avoid a page made entirely of bright-red blocks; the contrast and negative space are part of the premium feel.

Contrast and accessibility

Use white text on signature red for short, strong statements and buttons, and deep ink on light backgrounds for body copy. Check small red text on warm off-white for contrast before using it as body text. Never communicate status or meaning through color alone.

Important note

The exact red in the uploaded logo should be sampled from the original vector/artwork if available. #E00000 is a practical working token for implementation, not a claim that the source logo's pixel color has been measured precisely.

03 / Typography

The reference pairs oversized heavy display typography with smaller, clean supporting text and occasional handwritten/script accents. Nau K Do can use that hierarchy while keeping the interface legible and contemporary.

Recommended font roles

Role	Proposed family	Usage
Display / headlines	Space Grotesk or Manrope	Hero title, section headings, project titles; bold weights, tight but readable line-height.
Body / UI	Inter	Paragraphs, nav, buttons, labels, captions, forms.
Accent script (optional)	A restrained script font only if needed	Small decorative word above a hero headline; never for essential information.

Font rules

• Use no more than two main font families; treat any script font as a small decorative accent.

• Use strong size contrast and generous whitespace instead of adding more font styles.

• Keep paragraph text comfortably readable on mobile; do not shrink body copy to imitate a screenshot.

• Use the supplied logo artwork for the custom mixed-script name. Do not typeset or approximate the logo using ordinary fonts.

• Load fonts locally or through a reliable font provider, with appropriate fallback stacks.

These font families are recommendations, not established brand assets. Final selection should be checked in the browser against the real logo and hero composition.

04 / Logo and graphic language

The custom wordmark is the core brand asset. Its mixed-script construction should remain intact wherever the logo is used.

Logo handling rules

• Preserve the order and shape of the English “Nau,” Hindi-style K, and Urdu numeral ■.

• Do not remove the final Urdu numeral, redraw the logo using a standard font, distort proportions, or add effects that reduce legibility.

• Prefer the original vector file (SVG/PDF/AI) for web use. If only a raster image is available, use a high-resolution transparent PNG.

• Prepare light and dark-background variants only from approved artwork; do not automatically recolor a logo if the artwork's details would be lost.

• Create a compact favicon/social avatar separately if needed. Do not crop the full wordmark blindly into a square.

Supporting graphics

The Behance reference uses desktop folders, floating image files, app icons, a cursor, and small labels. For Nau K Do, use a related but original set of elements: project folders, image thumbnails, tiny red tabs, file labels, subtle pointer details, and small brand marks. Keep these as a coordinated system—not random decoration.

Avoid over-decoration: the project work and headline must remain the focus. Do not use arbitrary app logos unless they are relevant and permitted.

05 / Hero section art direction

The requested hero is specifically the desktop-inspired composition shown in the Behance reference—not a conventional split hero or a full-screen solid-red banner.

Composition

• Canvas: warm off-white, spacious, with generous breathing room.

• Top row: small category labels such as “web design,” “portfolio,” and “social media,” adapted to Nau K Do's work.

• Center: an oversized typographic headline, with the actual Nau K Do logo integrated as a signature.

• Around the headline: floating folder graphics, selected project thumbnails, and small visual objects positioned deliberately.

• Labels: short lowercase filenames or categories to reinforce the desktop metaphor.

• Navigation: simple, unobtrusive, and easy to find; the desktop illusion must not hide the actual site navigation.

• Bottom cue: a subtle “scroll to explore” or equivalent prompt.

Suggested hero copy (draft)

CREATIVE STUDIO

NAU K DO

Branding · Content · Digital Experiences

We help brands show up with clarity, character, and consistency.

The copy is a starting point and should be refined later. Do not claim awards, client counts, years of experience, or performance results unless the owner provides verified information.

Interaction and responsive behavior

• Desktop: use absolute positioning or a controlled composition grid for floating objects; keep elements inside the hero bounds.

• Motion: small, restrained entrance or hover effects; avoid continuous distracting movement.

• Mobile: rearrange the floating items into a clean stacked composition. Do not merely scale down the desktop positions.

• Accessibility: decorative elements should be ignored by screen readers; navigation and CTAs must remain keyboard-accessible.

• Performance: compress images, avoid large video backgrounds in the hero, and respect reduced-motion preferences.

06 / Landing page sections

The website can launch with the visual structure in place and project content added over time. Use clearly identified placeholders until actual work is supplied.

Section	Content and representation
01. Hero	Desktop-inspired composition; headline, actual logo, floating folders and project previews; clear navigation and CTA.
02. About	Editorial split layout: a strong statement, short agency description, brand story, and capabilities. Keep copy factual.
03. Social media & content	Large social campaign collage, post grids, phone mockups, reel covers, shoot stills, and a short list of deliverables.
04. Web design & development	Large desktop site preview, full-page screenshot, mobile layout, project objective, contribution, and live link if available.
05. Branding & identity	Logo presentation, palette, type, supporting graphics, and real applications such as packaging or social templates.
06. Video & motion	Poster frames or short video previews, motion samples, production stills, and simple category labels.
07. Process	A clear sequence such as Discover → Plan → Create → Refine → Deliver, adjusted to the agency's actual process.
08. Contact	Strong invitation, direct email/WhatsApp/social links, and optionally a working enquiry form.
09. Footer	Logo, short description, section links, social profiles, contact details, and copyright.

Page rhythm

Alternate visual densities: quiet editorial sections, large image galleries, and one or two darker or red feature panels. Do not make every section a three-card grid. Vary image scale and composition while keeping consistent type, labels, spacing, and color use.

07 / Portfolio content rules

The website can launch with the visual structure in place and project content added over time. The goal is to prepare the layout and data structure now, then add real projects gradually.

Recommended case-study fields

• Project name and category.

• Project type: client, personal, or concept project.

• Short project overview and objective.

• Nau K Do's actual contribution and deliverables.

• Images, screenshots, videos, mockups, and live links.

• Verified results only; omit metrics or testimonials when not supplied.

Suggested asset structure

```
public/
  brand/
    nau-k-do-logo.svg
    nau-k-do-logo-white.png
  projects/
    social-media/project-name/
    websites/project-name/
    branding/project-name/
    video-motion/project-name/
references/behance-portfolio-reference.pdf
```

Use descriptive lowercase names, for example real-estate-social-grid.webp, bakery-homepage-desktop.webp, or campaign-reel-poster.jpg. Keep source files organized and export optimized versions for the site.

Placeholder policy

Do not fabricate client brands, project results, testimonials, or portfolio screenshots. If concept work is created, label it as a concept. Use neutral placeholders that can be replaced without rewriting the page structure.

08 / Implementation brief for Google Antigravity

This section translates the brand into practical build rules. The agent should treat this PDF as a design reference alongside the original logo and the Behance portfolio PDF.

Suggested stack

• Next.js with TypeScript, suitable for deployment on Vercel.

• Tailwind CSS or carefully organized CSS; prioritize accurate custom composition over default component styling.

• Framer Motion only where animation improves the experience; avoid unnecessary dependencies.

• Local assets under public/ with responsive image sizing, optimized formats, and lazy loading below the fold.

• No database or backend is required for a static portfolio unless a real form or other functionality requires one.

Required implementation quality

• Build reusable components for navigation, section headings, project previews, galleries, CTAs, and footer.

• Make every link and button functional; use real destinations or clearly marked temporary links.

• Ensure desktop, tablet, and mobile layouts are designed intentionally.

• Support keyboard navigation, visible focus states, semantic HTML, alt text, and reduced-motion preferences.

• Optimize performance and avoid layout shifts from images without reserved dimensions.

• Add page title, meta description, Open Graph metadata, favicon, and basic sitemap/robots configuration where appropriate.

• Keep content and project data separate from layout so future projects can be added easily.

Suggested build sequence

1. Inspect the supplied logo and reference PDF.
2. Establish design tokens and typography.
3. Build and review the desktop-inspired hero.
4. Add the about section and reusable section system.
5. Add service showcases with replaceable project data.
6. Implement mobile behavior and interactions.
7. Test functionality, accessibility, performance, and Vercel build.

09 / Do and don't

DO	DON'T
Use the real Nau K Do logo artwork.	Recreate the mixed-script logo with a standard font.
Use the reference's composition and storytelling as inspiration.	Copy its beige/brown palette or reproduce it pixel-for-pixel.
Keep red as a signature accent against a calm editorial canvas.	Make every section a full-red block.
Use real project assets and factual descriptions.	Invent clients, results, testimonials, or statistics.
Create an intentional responsive layout.	Shrink the desktop hero without rearranging it.
Keep motion subtle and purposeful.	Use distracting animation or heavy autoplay media.
Make future project updates straightforward.	Hard-code project content throughout many components.

Agent handoff checklist

- ■ Attach this brand kit PDF to the Antigravity workspace.
- ■ Include the original Nau K Do logo file and the Behance reference PDF.
- ■ Ask the agent to inspect the references before coding and summarize its understanding.
- ■ Have it build the hero first and pause for visual review before expanding the page.
- ■ Keep copy, assets, and project data replaceable so the portfolio can grow later.

CORE CREATIVE RULE

Make it feel like a designer's curated desktop: expressive, editorial, and premium—while unmistakably Nau K Do through the logo and restrained use of red.

This is a working implementation guide. The owner-provided logo, mixed-script name explanation, red-and-white identity, agency services, and Behance reference are established inputs. Supporting colors, font families, sample copy, and technical choices are proposed directions to confirm during design review.
